

Leafhoppers & Endophytes

The role of leafhoppers in the ecology
of endophytic microorganisms

Proposal for a MCSA fellowship at
Fondazione Edmund Mach (FEM)

The Department of Sustainable Agro-Ecosystems (DASB) seeks to support a **MCSA candidate** in the field of **tripartite interactions** (plant-microbe-arthropods) with focus on agroecosystems and on **the role of insects in the ecology and diffusion of plant microbial symbionts**.

Preliminary studies carried out in DASB show the enormous potential of plant-feeding insects in the transmission of nonfastidious microbes. We seek to expand our commitment in this field by welcoming **postdoctoral MCSA applicants**.
